DETAILED ACTION

Papers Received

Receipt is acknowledged of the applicant's pre-appeal brief request for review, received on 18 June 2007.

Withdrawal of Finality

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by the Restaurant Wine reference as evidenced by the Clear Creek Distillery reference.

The references describe a grappa moscato, which is a brandy made from the pressed skins and seeds of Muscat grapes. This disclosure is considered by the examiner to read on the instant claim limitations of a composition comprising a grape skin extract and a Muscat grape seed extract. As such, the instant claims are anticipated.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The rejection of Claims 1-24, 33 and 34 under 35 U.S.C. 103(a) over Perkes (WIPO Publication No. WO 99/07400) in view of Shrikhande *et al.* (U.S. Patent No. 6,544,581) is maintained.

Response to Arguments

Applicant's arguments filed 18 June 2007 have been fully considered but they are not found to be persuasive.

In the declaration submitted by the applicant, it is stated that the increases in platelet aggregation for Formulation A at a dose of 380 mg/L and Formulation B at a dose of 250 mg/L rebuts the prior art rejection based on obviousness. However, the results for Formulation A at a dose of 760 mg/L show the same high inhibition results for all seed extracts. This raises the question of whether the results presented by the applicant are commensurate with the scope of the instant claims, since it would seem that at high dosages, there is no discernible difference between the prior art compositions and the instantly claimed invention.

Furthermore, there is no mention on the comparability of the extracts themselves. No analysis was made to see if each of the extracts used had similar amounts of active ingredients relevant to cardiovascular health, such as polyphenols, anthocyanins and other antioxidants. It is the position of the examiner that it is within the level of skill of one of ordinary skill in the art to adjust the amount of extract used to obtain a formulation that had an optimal level of such active

ingredients. It is known in the art that extracts may be standardized at particular levels of active components, but this does not guarantee similar levels of such active components from an extract supplied by one source to an extract supplied by another source, even if such extracts are of a similar nature.

Therefore, it is the position of the examiner that the applicant has not sufficiently rebutted the prior art rejection of record. As such, the prior art rejection under 35 U.S.C. 103 is maintained.

Additionally, the examiner has made a new ground of rejection for anticipation, as detailed above.
